

Doctoral Studies in Earthquake Science & Applied Geophysics:

SDSU/UCSD Joint PhD Program in Geophysics

San Diego State University & University of California San Diego are accepting Fall 2027 applications for the SDSU/UCSD Joint Doctoral Program in Geophysics.

The UCSD/SDSU Joint Program is a collaboration between geophysicists at UCSD's Scripps Institution of Oceanography and SDSU's Department of Earth and Environmental Sciences. The Joint Program was inaugurated in Fall 2010.

The UCSD core Geophysics curriculum provides students the foundation for advanced coursework and dissertation research that may be undertaken with participating faculty at both universities.

The Joint Program addresses fundamental science related to earthquake hazards, energy and the environment, using tools

from geology, terrestrial and marine geophysics, and advanced computation. Areas of specialization include: earthquake physics, wave propagation and strong motion, crustal deformation and tsunami modeling, fault zone structure and dynamics, induced seismicity, hydrological modeling, computational seismology, and subsurface imaging.
